AUG 22 2001  
TC 3700 MAIL ROOM

1.(Amended) A chest wall oscillation method comprising:

applying an oscillating compressive force to a chest of a patient which includes a steady state force component and an oscillating force component; and  
supplying air pressure to a mouthpiece in communication with a mouth of the patient with an oscillating air pressure component and with a steady state air pressure component which is in a direction and which has a magnitude which tends to counteract the steady state force component of the oscillating compressive force.

2. The method of claim 1 wherein the steady state air pressure component at least approximately equals a mean pressure exerted on the patient's chest by oscillating compressive force.
